

CMIT Cybersecurity Assessment™ Safeguards Your Business

Personalized. Intelligent. All-inclusive.

Cybersecurity threats are a leading cause of business failure. According to the FBI over 1 billion dollars have been paid in the last year to hackers. How do you protect your business, at a price you can afford? The CMIT Cybersecurity Assessment™ is an all-inclusive, personalized analysis of your business.

We have a proven process that intelligently assesses your security requirements and protections. We will help you find your high-risk areas and recommend the proper safeguards that will help deter cyber-attacks. We give you the recommendations you need to protect your business and your clients.

Nearly a quarter of the organizations that have suffered a cyberattack lost business opportunities. 40% said those losses are substantial. 20% of organizations lost customers due to an attack and nearly 30% lost revenue. A data breach can result in the loss of customers and revenue.

CMIT Cybersecurity Assessment™ safeguards your business with:

- › A personalized cybersecurity assessment
- › In-depth business privacy and security interviews
- › Automated network and technical data collection
- › Extensive technical and business analysis
- › Findings and recommendations
- › Action plan for your protection

OUR PROCESS

Meet with our cybersecurity team to identify your security risk profile. With this information we can personalize your cybersecurity assessment. We will review our standard assessment methodology, and schedule two hours for interviews and data collection. After we complete the diagnostic investigation, we will present our findings and recommendations to you.

YOUR PROFILE

Your profile is based on your risk and industry regulations. We have 8 unique profiles, each tailored for regulatory and business requirements. We personalize the appropriate profile to your business.

SECURITY CONTROLS

Whether your business must adhere to contractual or regulatory requirements (eg. HIPAA, FINRA, PCI-DSS, DFARS), you need the proper privacy and security controls. The CMIT Cybersecurity Assessment™ inspects your business and determines whether or not your security controls are operational. We will help you discover if you have the proper policies, procedures, and technical infrastructure to support your privacy and security controls. The CMIT Cybersecurity Assessment™ is a proven tool for this evaluation.

TAKE ACTION

The CMIT Cybersecurity Assessment™ will educate you on the correct cyber security protocol. We have taken the time to evaluate the proper procedures to protect your network. Let CMIT Solutions help you safeguard your business.
